

FOR IMMEDIATE RELEASE

Westpro Constructors Group Inc. Joins Forces with Giffels

Surrey, BC – April 7, 2010 –Westpro Constructors Group Ltd. of Surrey, BC, is proud to announce that they have become part of the Ingenium Group of companies. This acquisition will merge Westpro with Ingenium’s construction division, comprising Giffels Corporation, Giffels Infrastructure Inc., Giffels Partnership Solutions and Design & Construction Giffels Québec Inc.

Joining the Ingenium Group will complement and expand Westpro’s diversified range of services and expertise in construction, design-build and partnership solutions from coast to coast.

Westpro was established in 1993 as the BC division of a large multi-national construction group and was subsequently acquired by its management team, headed by Joel Nauss. Westpro quickly became an innovative and profitable mid-sized construction company, with a core employee group of just under 50, expanding to 100 or more based on project volume.

The company will operate as Westpro Infrastructure Ltd. to undertake transportation and infrastructure projects and will provide management support for Giffels ongoing activities with institutional and commercial buildings in Western Canada.

“Our office is extremely happy to have joined the Ingenium family,” stated Joel Nauss, President, Westpro Constructors Group Ltd. “We think this a perfect match of our two companies and with the established contacts, clients and project history that we have in Western Canada, the Giffels and Westpro brands will become well known in a very short time. This merger gives us the ability to expand our business, resources and corporate profile across Canada and allows us to provide new areas of expertise to support our clients.”

Joel Nauss went on to say, “Our current clients will appreciate that there will be no change in management structure or significant alteration in direction. Westpro will maintain our ‘hands-on’ approach to managing our contracts, with the same managers. It will be ‘business as usual’ for our clients, suppliers and subcontractors, with the added benefit of much greater resources and expertise on which to draw.”

Westpro is a multi-disciplined firm with expertise in all aspects of heavy civil construction including; earthworks, sewer and water, welded steel water main construction, concrete forming and placing, infrastructure, mechanical and electrical construction. It is also one of Western Canada's preeminent commercial general contractors specializing in institutional, commercial and infrastructure construction. Westpro also has extensive experience in completion of seismic upgrade projects as well as expansion, construction and major renovations in existing operating buildings.

Already, Giffels and Westpro enjoy a successful working relationship on a significant BC project, the Alouette Correctional Centre for Women.

"Our companies provide services to a broad range of business sectors which allows us to be flexible and adaptable as the economy evolves," says Victor Smith, CEO, Ingenium Group and President of Giffels Corporation. "We believe that in today's market and certainly for the foreseeable future, a strong management team and market diversity are critical for growth. Bringing Westpro into our organization will be a key factor in achieving both objectives. Together we are going to build on our strong reputations for quality design and construction services and offer a range of services and depth of experience unmatched in Canada."

Over the past five years, Westpro has successfully completed over 40 projects ranging in size \$500,000 to \$20 million and their present annual volumes exceed \$50 million. Some of their projects include: numerous rapid transit structure and stations on the Expo Line, Millenium Line, Westcoast Express and, more recently, the Canada Line, including the Operations and Maintenance Facility; extensive airside works for YVR; numerous water and wastewater treatment facilities in the Lower Mainland; and at Whistler, the recent South East False Creek Energy Centre for the Olympic Village; large institutional laboratories and administration buildings at UBC; environmental industrial facilities for the large local BC shipping companies; marine- and land-based work on the Golden Ears Bridge; a Fuel Cell Innovation Research Laboratory for the Federal Government; and an extension to the Nuclear Research Centre at TRIUMF. Having recently established an operation in Calgary and the commencement of a large multi-lane bridge for Alberta Transportation, Westpro is growing its business in Alberta.

Westpro clients will now be able to draw on the resources of the entire Giffels construction division, with integrated capabilities in all facets of construction, design-build and partnership solutions focusing on public sector markets including education, justice, specialized housing and municipal buildings as well as continuing with their existing relationships on major infrastructure projects.

Giffels Corporation: Giffels Corporation is part of the employee-owned Ingenium Group of companies which has offices around the globe. The Ingenium strategic vision is to provide clients with integrated construction, architectural and engineering services and solutions from a single source provider.
